An intact environment is our greatest treasure. With special technologies and patented processes, the Zech Umwelt Holding companies treat or purify contaminated soil, groundwater and air, both nationally and internationally. They also possess special know-how in heat-resistant technology, in technical insulation and in chimney construction.

Full-Service Redevelopment of Hazardous Waste Sites

Creating new possibilities through ecological solutions at economic prices that is our motto. The services offered by Zech Umwelt Holding range from area recycling to water and waste-air purification and even to management of materials flow and plastic recycling. We are a full-service redeveloper of hazardous waste sites and have the most dense network of soil-purification plant in Germany.

An Answer for Every Challenge

We take on orders and projects of all sizes, from start to finish, cross-border and branch-overlapping. We advise and we plan, we prepare restoration concepts and implement these successfully, even when confronted with complex problems. In the process we make use of the latest plant engineering and innovative recycling and treatment processes, which themselves are continuously improved by us. Our highly qualified employees seek the best solution, based on decades of experience and their professional approach.

Fireproof Construction, Chimney Construction and Insulation

In the field of fireproof cladding and redevelopment our company has numbered amongst Germany's leading specialists since 1919. Whether in the field of petrochemicals, energy production or industrial manufacturing we supply furnaces and combustion chambers and furnish these with cladding appropriate to the respective fireproof requirements. We also provide support for our customers in the context of technical insulation and protective measures against heat, cold, fire hazards and sound emissions. In addition to this our specialists erect, service and repair industrial chimneys made of brickwork, concrete or steel.
